## **CLINICAL UPDATE ON THE USE OF PROGESTERONE TO PREVENT PRETERM BIRTH**

EXPECTED DATE OF RELEASE:  
WINTER 2017

### Course Director:

Audra Robertson Meadows, MD, MPH  
Brigham & Womens Hospital  
Dept of Obstetrics and Gynecology

### Course Contributors:

Nicole A Smith, MD, MPH  
Nawal Nour, MD, MPH  
Khady Diouf, MD  
Julianna Schantz-Dunn, MD  
Suha J Patel, MD  
Beth Buxton, LCSW  
Margaret Levene, MPH  
Christina Gebel, MPH

This online activity is designed to provide education to obstetrical care providers on the clinical use of progestogens for preterm birth prevention and tools to overcome barriers to progesterone use. Three patient cases will address current practice guidelines, the evidence supporting this best practice, a description of compounded and commercially produced progestogens available and strategies to streamline administrative management in clinical practice. Specifically this activity will provide a toolkit to educate participants on the most recent and updated clinical evidence related to this topic and to improve access to progesterone use. This activity will provide access to materials including educational materials and recommendations for counseling women about the benefits of progesterone use during pregnancy to prevent preterm birth, clinical protocols as an easy guide for providers and a guide to help providers streamline administrative steps.

This course is intended for nurses, nurse practitioners, nurse midwives, physician assistants, physicians and other health care providers collaborating to prevent preterm birth among women at increased risk.

This is available free of charge. Upon completion you may earn 1 or 2 CME credits.
